(54) RADIO REPEATING SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a repeater which can suppress the power consumption of a receiver and a transmitter, expand the communication area of a system, and improve the quality of a radio communication for a system wherein the transmit signal sent by a battery-driven transmitter at irregular time is received at irregular time by a battery-driven receiver operating by intermittent reception.

SOLUTION: This radio transmission and reception system comprises a transmitter 1 and a receiver 2 which are both portable, and a repeater 51 receives a signal sent by the transmitter 1 and sends the received signal 57 to the receiver 2 repeatedly.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's
decision of rejection]

[Date of extinction of right]
